EDUCATIONAL OBJECTIVES

The Simplified Digital Protocol (SDP), presented by Prof. Tiziano Testori, is a novel immediate loading protocol. This digital protocol simplifies the procedures for the surgical team, reduces costs and discomfort for the patient while maintaining a high implant-prosthetic success rate with high patient satisfaction. Furthermore, an innovative protocol for making a predictable full-arch digital impression will be shown.

Jeff Ganeles, international lecturer and inventor of the procedure “TeethToday” will present the state of the art of the US perspective in immediate loading followed by a panel discussion.

Immediate dental rehabilitation with fixed restorations can be a life-changing event for patients. Delivering this service to someone in need is one of the most gratifying and rewarding services a dentist can provide, frequently reversing decades of anxiety, disease and unsuccessful treatment. It is also one of the most complex procedures done in dentistry as it forces sophisticated surgical, prosthetic and laboratory procedures, often performed by different individuals, to be done in a compressed time period.

Many different types of graftless treatment can be provided depending on patient needs and professional therapeutic objectives.

Options vary from crown and bridge style cases on axially positioned implants to hybrid restorations placed on tilted implants. Examples for different styles of treatment will be presented illustrating different strategies of full-arch loading.

Indications and contraindications for various approaches will be discussed as well as examples of guided versus non-guided surgery and provisionalization.
